

Fainting, Dizziness, Vertigo, Syncope

These words reflect the same problem: a more developed sense of the world spinning around. Could be that you have an inner ear problem, adverse reaction to medicine, or underlying cerebral vascular disease. We need to know what is the cause of the problem. The underwriting will be based on the diagnosis. If no definitive cause can be found the longer the duration, the more likely an offer can be made. The rate will be reflective of this. The APS is the best source along with the applicant. The more thorough the investigation the more likely an offer will be made.
