

Nephrectomy

It is the surgical removal of one kidney. Individuals can get by adequately with just one, if it is healthy and disease free. The concern is why? Was it due to an injury, cancer, kidney stones, or another disease? The rates will be based on cause. STD is not out of the question, but it will depend on the reason for removal. Find the cause and we will give you the rate. The applicant and relevant APS will be required. Both sources will provide the details necessary to make an offer.
