

### **Polyps, Cysts, Tumor or Growth**

If you ever had one you know what exactly it was or is. They are mostly characterized as an unusual mass of tissue that in most cases is benign and can be found anywhere in the body. If chemotherapy or radiation was involved it is highly probable there was malignancy. The underwriter will need to see the pathology (path) report. Details regarding location, type of treatment, and other health problems will be needed. The rate will be based on these facts. Standard and up is the way they go.

**See the [Cancer](#)** section for more details
