

Thyroid Disorders

The conditions which routinely appear are hypothyroid (underactive) and hyperthyroid (overactive). In both cases with successful medical management there is no additional mortality charge. Cancer is treatable because of the propensity of the thyroid to absorb radioactivity. The usual cancer underwriting requirements apply. The APS will be required in all cases. Please refer to the Cancer Questionnaire.

For the non cancer disorders Standard is the usual course of action.

* *See the [Cancer](#) section for more details*
